

HB4150 Overview

Improving Patient Safety
Through Overdose Notifications

Introduction

- HB4150 establishes a notification system within the prescription monitoring program to inform practitioners about patient overdoses.

Key Features

- **Notification system** for fatal/nonfatal overdoses

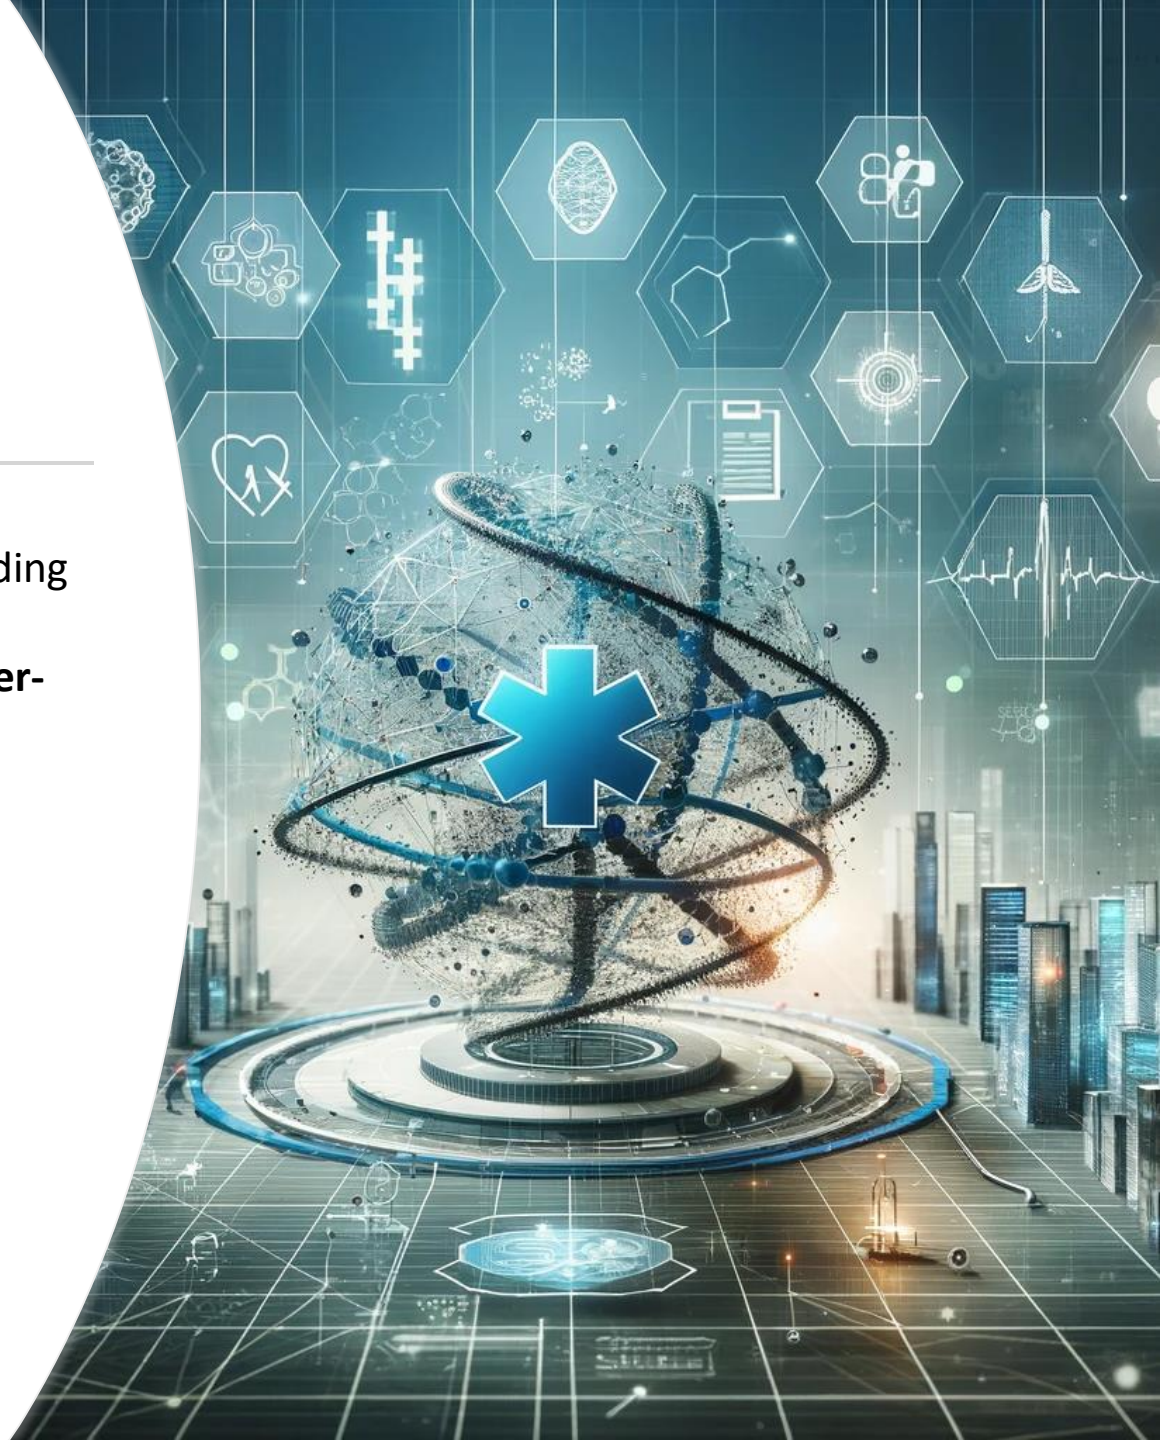

- Information use is **limited and protected**

- Operative on January 1, 2025, sunsets January 1, 2028

Objectives

- To enhance patient care by providing **critical overdose information to practitioners, thus enabling better-informed healthcare decisions.**

Conclusion

- HB4150 represents a significant step towards **integrating health informatics** to improve **patient safety and care.**
