

Submitter: Rebecca Schoon

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB4130

As a professor of public health who studies health systems, I urge your support of HB 4130. Corporatization of health care turns health care into a profit-making tool at the direct expense of patient needs. Every other high-income nation in the world has recognized that the private profit motive in health care needs to be minimized, if not eliminated. Research demonstrates privatization harms patient outcomes and provider experience, while driving higher health care costs. Please support HB 4130.
