

Chair Holvey, Vice-Chairs Elmer and Sosa, and members of the House Business and Labor Committee,

Attached are letters from members of LIUNA Local 737, all submitted in support of HB 4080. This bill is an important signal to the federal government and stakeholders: Oregon is committed to developing a roadmap towards ensuring offshore wind development is an inclusive, community-driven process. This bill further affirms that offshore wind development can and should be tied to pro-worker policies.

LIUNA Local 737 represents thousands of construction craft Laborers across the state of Oregon. Our members build the critical infrastructure that Oregonians rely on everyday, and our industry-leading apprenticeship program trains the workforce of tomorrow. A community-driven offshore wind development process will ensure that Oregon continues on its path towards a just transition to renewable energy, and that this transition centers workers and equitable economic development.

LIUNA Local 737 encourages you to support HB 4080.

Ryan Nielsen

Political and Legislative Representative

Laborers' International Union of North America (LIUNA) Local 737

I am a member of LIUNA Local 737 and I am submitting this letter urging the Legislature to adopt labor standards for offshore wind development off the Oregon coast.

Oregon must meet its ambitious climate goals. Our state has made an important commitment to doing so by taking a high road approach to renewable energy project development that will help to ensure a just economic transition for working families and our communities. While offshore wind projects fall largely under federal jurisdiction, our state should clearly state our values around how we want this development to happen. During the 2021 legislative session, the Legislature passed HB 2021. HB 2021 is landmark climate legislation that adopted a series of pro-worker reforms for the development of renewable energy projects in our state, including area standard wages (tied to prevailing wages in our state's construction industry), mandatory healthcare and retirement benefits, apprenticeship utilization, diversity, equity, and inclusion requirements, a history of compliance with labor laws, and more. **The Legislature has previously made it clear: Oregon's energy future can and should be tied to pro-worker policies. The current Legislature should continue to affirm these same values for offshore wind development.**

These labor standards are a crucial part of developing a roadmap for offshore wind and creating an adequate stakeholder engagement process between impacted communities, organizations, and tribes. By pushing the federal government to enact high road labor standards, Oregon can ensure impacted communities and individuals have access to lifelong careers with good wages and benefits in the construction trades.

I am a member of LIUNA Local 737 and I am submitting this letter urging the Legislature to adopt labor standards for offshore wind development off the Oregon coast.

Oregon must meet its ambitious climate goals. Our state has made an important commitment to doing so by taking a high road approach to renewable energy project development that will help to ensure a just economic transition for working families and our communities. While offshore wind projects fall largely under federal jurisdiction, our state should clearly state our values around how we want this development to happen. During the 2021 legislative session, the Legislature passed HB 2021. HB 2021 is landmark climate legislation that adopted a series of pro-worker reforms for the development of renewable energy projects in our state, including area standard wages (tied to prevailing wages in our state's construction industry), mandatory healthcare and retirement benefits, apprenticeship utilization, diversity, equity, and inclusion requirements, a history of compliance with labor laws, and more. **The Legislature has previously made it clear: Oregon's energy future can and should be tied to pro-worker policies. The current Legislature should continue to affirm these same values for offshore wind development.**

These labor standards are a crucial part of developing a roadmap for offshore wind and creating an adequate stakeholder engagement process between impacted communities, organizations, and tribes. By pushing the federal government to enact high road labor standards, Oregon can ensure impacted communities and individuals have access to lifelong careers with good wages and benefits in the construction trades.

I am a member of LIUNA Local 737 and I am submitting this letter urging the Legislature to adopt labor standards for offshore wind development off the Oregon coast.

Oregon must meet its ambitious climate goals. Our state has made an important commitment to doing so by taking a high road approach to renewable energy project development that will help to ensure a just economic transition for working families and our communities. While offshore wind projects fall largely under federal jurisdiction, our state should clearly state our values around how we want this development to happen. During the 2021 legislative session, the Legislature passed HB 2021. HB 2021 is landmark climate legislation that adopted a series of pro-worker reforms for the development of renewable energy projects in our state, including area standard wages (tied to prevailing wages in our state's construction industry), mandatory healthcare and retirement benefits, apprenticeship utilization, diversity, equity, and inclusion requirements, a history of compliance with labor laws, and more. **The Legislature has previously made it clear: Oregon's energy future can and should be tied to pro-worker policies. The current Legislature should continue to affirm these same values for offshore wind development.**

These labor standards are a crucial part of developing a roadmap for offshore wind and creating an adequate stakeholder engagement process between impacted communities, organizations, and tribes. By pushing the federal government to enact high road labor standards, Oregon can ensure impacted communities and individuals have access to lifelong careers with good wages and benefits in the construction trades.
