

Submitter: Krystyl Snodgrass
On Behalf Of:
Committee: Senate Committee On Education
Measure: SB1583

I oppose this bill. Kids are in school to learn NECESSARY information for building their knowledge on things like math and science. We don't need books that push adult ideology and concepts onto children who, based on proven brain science and development, are not scientifically capable of understanding those concepts. Instead of pushing for them to be exposed to concepts that they don't need to focus on, we should be more worried about if they are capable of hitting the standards of basic knowledge needed to be capable adults in society. Children go to school to become productive humans in our community who can do math and read, not become social activists who question the fact that 2 plus 2 equals 4. Let parents parent their own children and let schools teach the basics of math, English, science and history to be useful members of society and not a drain on our community. It's not your place to decide that for Oregonian families. We are your boss, not the other way around.
