

Submitter: Donna Bleiler

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB1581

This requirement is going to backfire. It requires any investor-owned utility that sells more than two million megawatt hours of electricity in a calendar year to report its activities related to participating in a regional energy market. Unless the utility can significantly go over the two million threshold, they will stop short. After all, most want to be off the grid and will short production to maintain that status.
