

Submitter: Anne Bryant

On Behalf  
Of:

Committee: House Committee On Emergency Management, General  
Government, and Veterans

Measure: HB4044

I am writing in support of HB 4044 in light of the dangers toxic fumes pose to every one of us, from unborn babies to those who are near the end of life. I am also writing as a 72 year old with asthma. We all know that a large earthquake will come to Oregon that will cause massive destruction. Please support this study so responsible governments, businesses and non-profits can have enough data to plan ways to ensure safety for us all. The State and first responders can't plan for appropriate prevention if they don't know what specific potential threats an explosion or leak of toxic fumes to prepare for. Thank you for moving this bill to the floor for a vote.

Sincerely,  
Anne Bryant
