

Submitter: Patricia Barcroft

On Behalf Of:

Committee: Joint Committee On Addiction and Community Safety Response

Measure: HB4002

I'm very surprised that it appears that many legislators do not have an understanding of addiction and how it works and yet they are the ones voicing opinions. Just based on the science I do not understand how the original measure made it to the place of being on the ballot - but here we are. I support Measure 110 but am disappointed it is not stronger. Has the state done it's due diligence to know from a research standpoint which treatment modalities work and what ones don't so when it comes time to allocate grants the treatment agencies the funds are not wasted?
