# Inside 'TALON,' the Nationwide Network of AI-Enabled Surveillance Cameras

## MARCH 2021

"FLOCK already has their license plate reader systems in several neighborhoods in North SA [San Antonio] now," James Glass, the deputy director of the Southwest Texas Fusion Center, wrote in an October 2020 email to colleagues. "In order to be granted free access to search the FLOCK system for license plate reader hits, we are asked to agree to sign this MOU." Glass did not respond to a request for comment.

# Flock system bars federal agencies from direct access to data

Story by Ashley Knight • June 26, 2025 •  3 min read

PORPSMOUTH, Va. (WAVY) — Flock, the automatic license plate reader company used by many law enforcement agencies in Hampton Roads, will not allow federal agencies to have direct access to its data, but there is some confusion surrounding this new policy.

"Up until yesterday, ICE could tap into Virginia's Flock network and use it for the purposes of immigration and enforcement," Attorney Tim Anderson told 10 On Your Side Thursday. "That changed yesterday."

# Flock admits federal immigration agents have direct access to tracking data, despite previous claims

Flock said it has a pilot program, giving Border Patrol a Flock account, which can request 1:1 access from local law enforcement agencies

DENVER — Flock Safety, the company operating license plate reading cameras across the United States and in dozens of Colorado municipalities, now admits federal immigration agents have direct access to local police data through a pilot program, contradicting months of public denials about such arrangements.

The company confirmed to 9NEWS on Tuesday that it has been operating a pilot program with U.S. Customs and Border Protection aimed at disrupting drug and human trafficking operations. The revelation comes after 9NEWS discovered through public records last week that the Loveland Police Department was sharing access to its Flock camera data with Border Patrol agents.

Initially, Flock said the data sharing was entirely Loveland's and Border Patrol's initiative through a separate one-to-one agreement. The company now acknowledges the connection exists through a previously publicly undisclosed program that allows Border Patrol access to a Flock account to send invitations to police departments nationwide for one-to-one data sharing, and that Loveland accepted the invitation.

A spokesperson for Flock said agencies across the country have been approached and have agreed to the invitation. The spokesperson added that U.S. Border Patrol is not on the nationwide Flock sharing network, comprised of local law enforcement agencies across the country. Loveland Police says it is on the national network.

# CBP Had Access to More than 80,000 Flock AI Cameras Nationwide

Customs and Border Protection (CBP) regularly searched more than 80,000 Flock automated license plate reader (ALPR) cameras, according to data released by three police departments. The data shows that CBP's access to Flock's network is far more robust and widespread than has been previously reported. One of the police departments 404 Media spoke to said it did not know or understand that it was sharing data with CBP, and Flock told 404 Media Monday that it has "paused all federal pilots."

## Flock Safety halts federal pilot programs involving homeland security

[Haleigh Kochanski](#)

Eugene Register-Guard

"We clearly communicated poorly," Garrett Langley, CEO of Flock Safety, said in a statement. "We didn't create distinct permissions and protocols in the Flock system to ensure local compliance for federal agency users."

# ICE, Secret Service, Navy All Had Access to Flock's Nationwide Network of Cameras

Individual police departments then enable Flock's national lookup tool in their settings, which lets agencies from other states even on the other side of the country search cameras for specific vehicles. Police can only perform nationwide searches if they also provide access to their own data. Flock said in August 75 percent of its law enforcement customers were enrolled in the national lookup tool

Multiple federal agencies in turn had access to this national lookup tool
