

Oregon's Ungulate Populations

BRIAN WOLFER
WILDLIFE DIVISION DEPUTY ADMINISTRATOR

DARREN CLARK
EAST REGION WILDLIFE RESEARCH LEAD

Overview

Ungulate population trends and management strategies

Predators of ungulates

Ongoing research – mule deer

Improving elk management

Manage Populations for Long Term Health

Informed by data

Population surveys

Habitat surveys

Disease sampling

Harvest reporting

Research

Guided by plans

Strategies and
actions to address
limiting factors

Sustainable harvest
frameworks

On-the-Ground-Action

Protect & restore habitat

Manage conflict

Manage harvest

Ungulates

Elk Population Estimates

Roosevelt Elk

Rocky Mt Elk

Elk Populations

Conservation Success

Near or above population management objectives

- 24 of 35 eastern Oregon units
- 6 of 19 western Oregon units

Elk Populations

Conflicts with agriculture

Manage populations to reduce conflicts

Special hunting opportunities

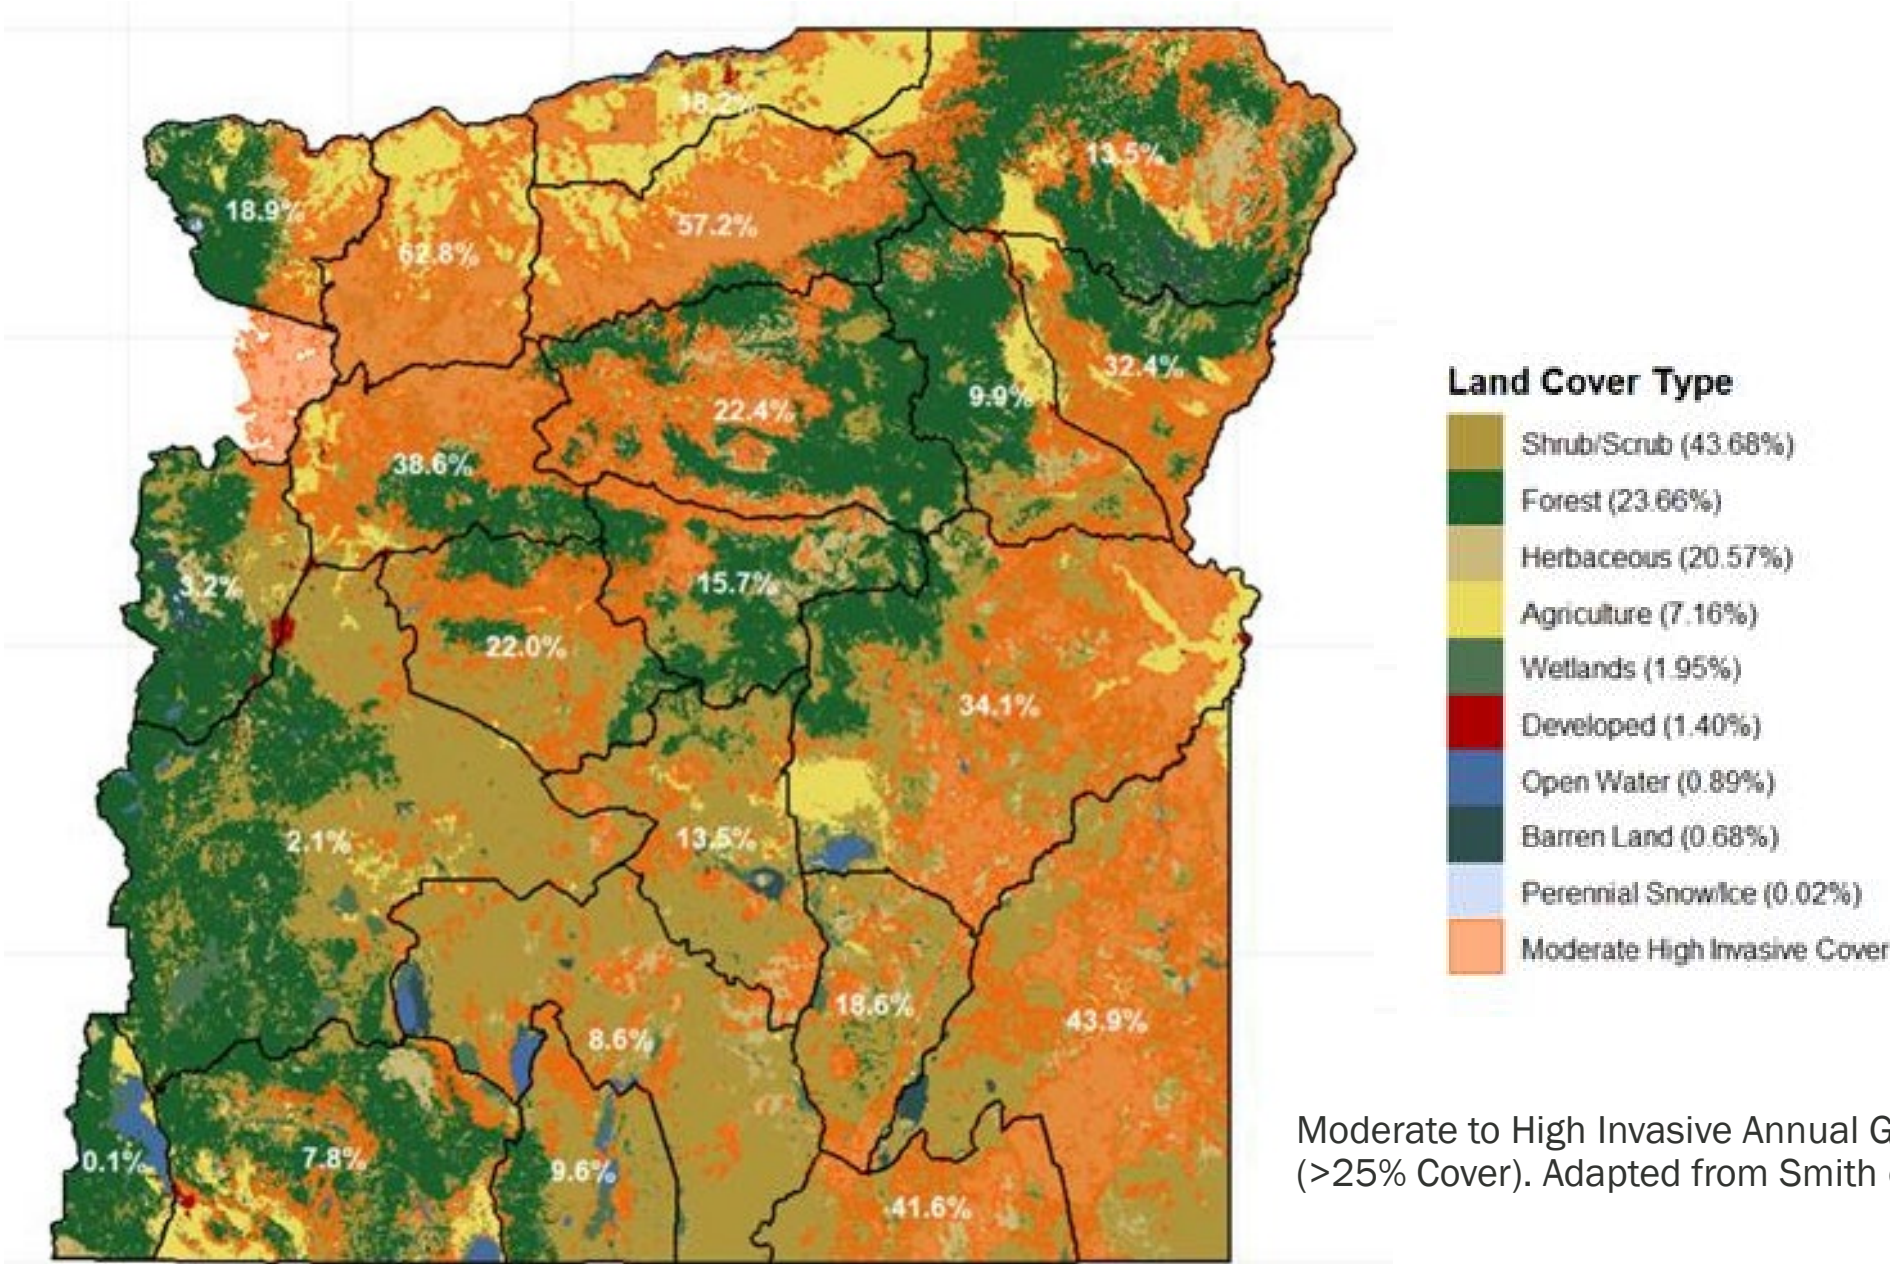

- Landowner damage tag program
- General season antlerless elk damage hunt

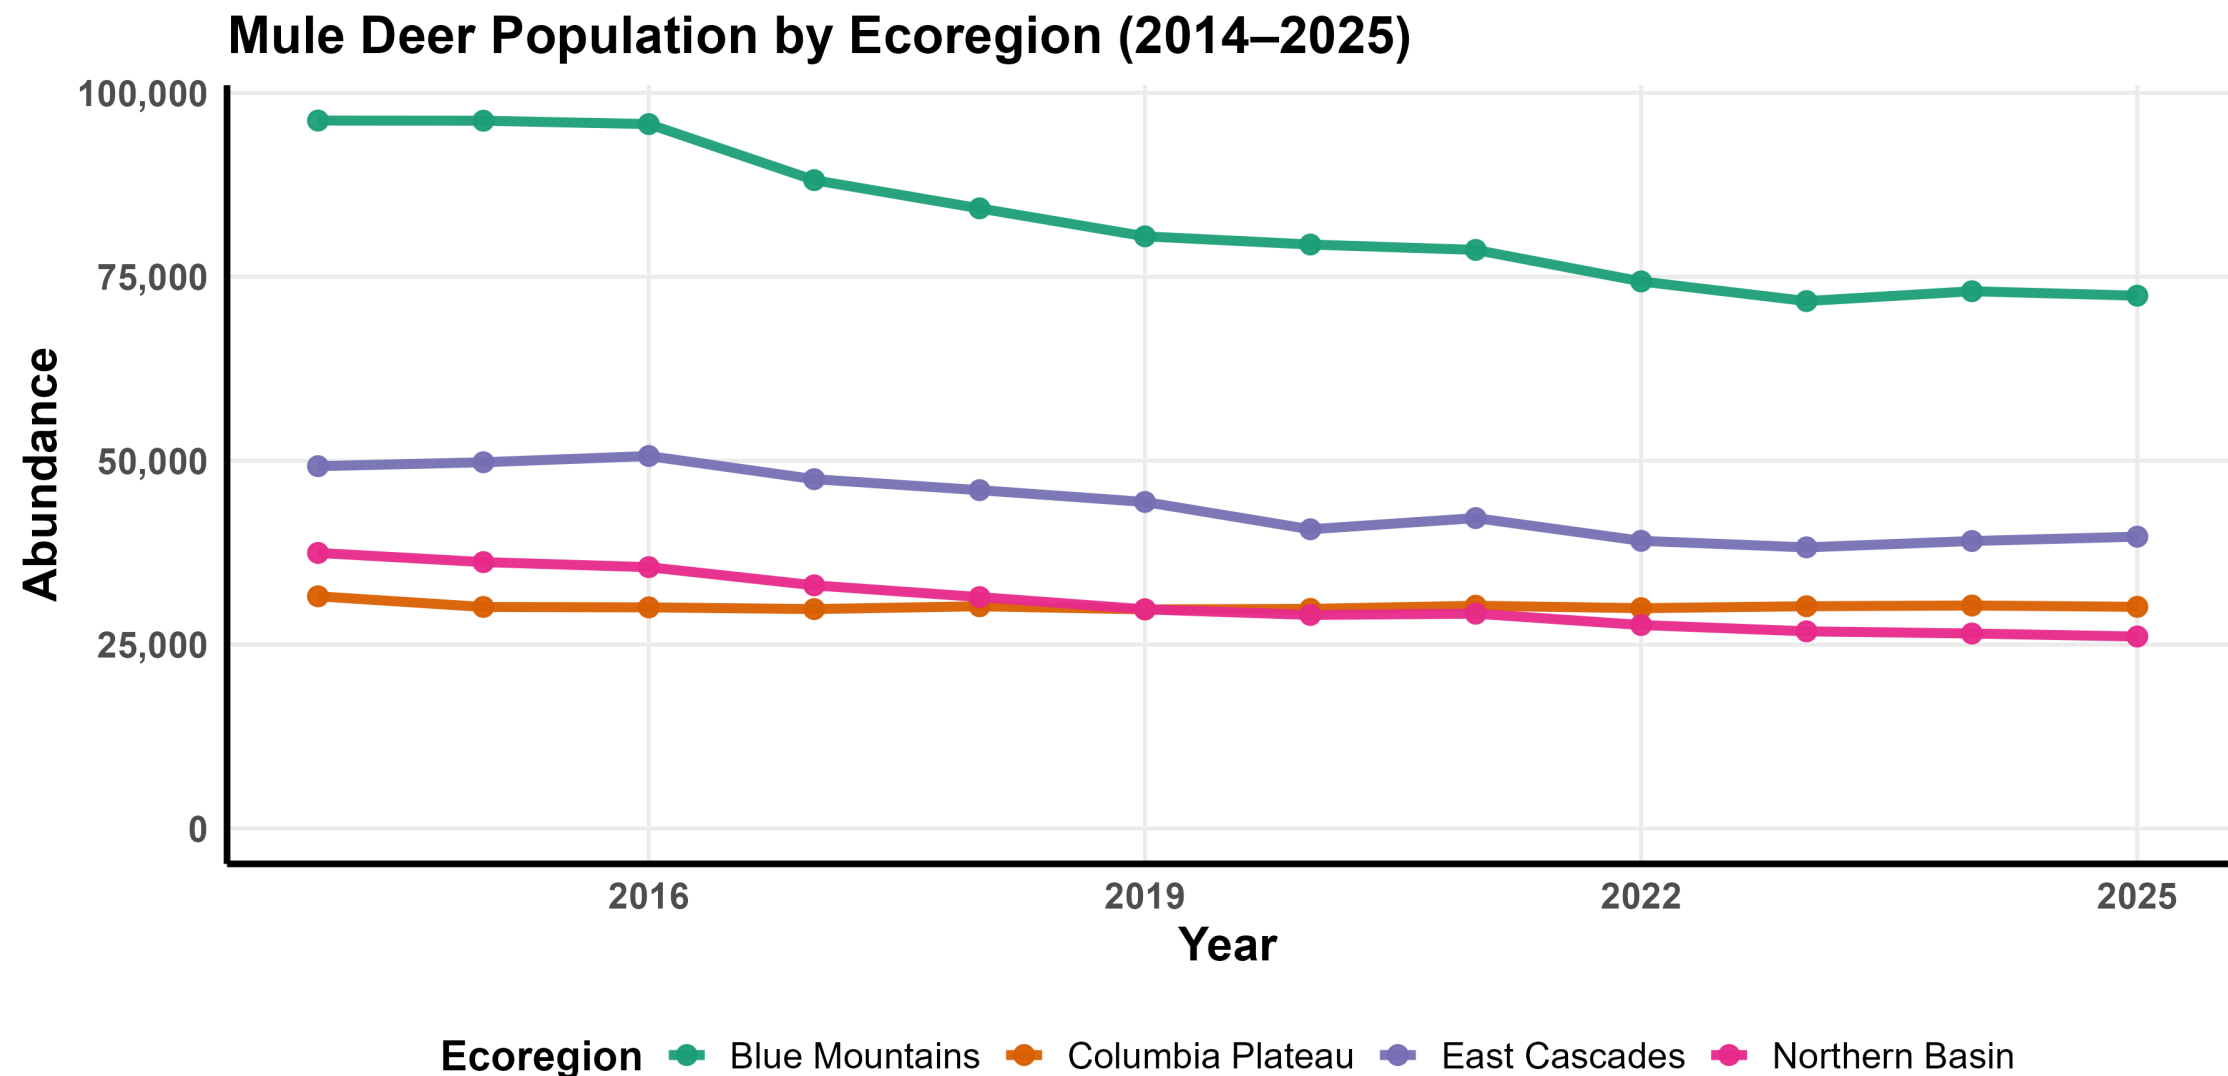

Pronghorn Population Mirrors Recent Drought

National Land Cover Database – Eastern Oregon

Mule Deer

Mule Deer

- Declining across geographic range
 - Estimate 2.5% average annual decline
- Declines due to combination of factors
- Mule Deer Working Group member

RANGE-WIDE GUIDELINES for Seeding Mule Deer and Black-tailed Deer Habitat

Mule Deer
Working Group

Black-tailed Deer

- Challenging species to survey
 - Deer density highly variable
 - Canopy cover most predictive variable
- No population management objective
 - Benchmarks for buck ratios

Primary Predators of Ungulates

Predator Management

Big Game

Cougar

Black Bear

Gray Wolf*

Unprotected / “Predatory Animal”

Coyote

Furbearers

Bobcat

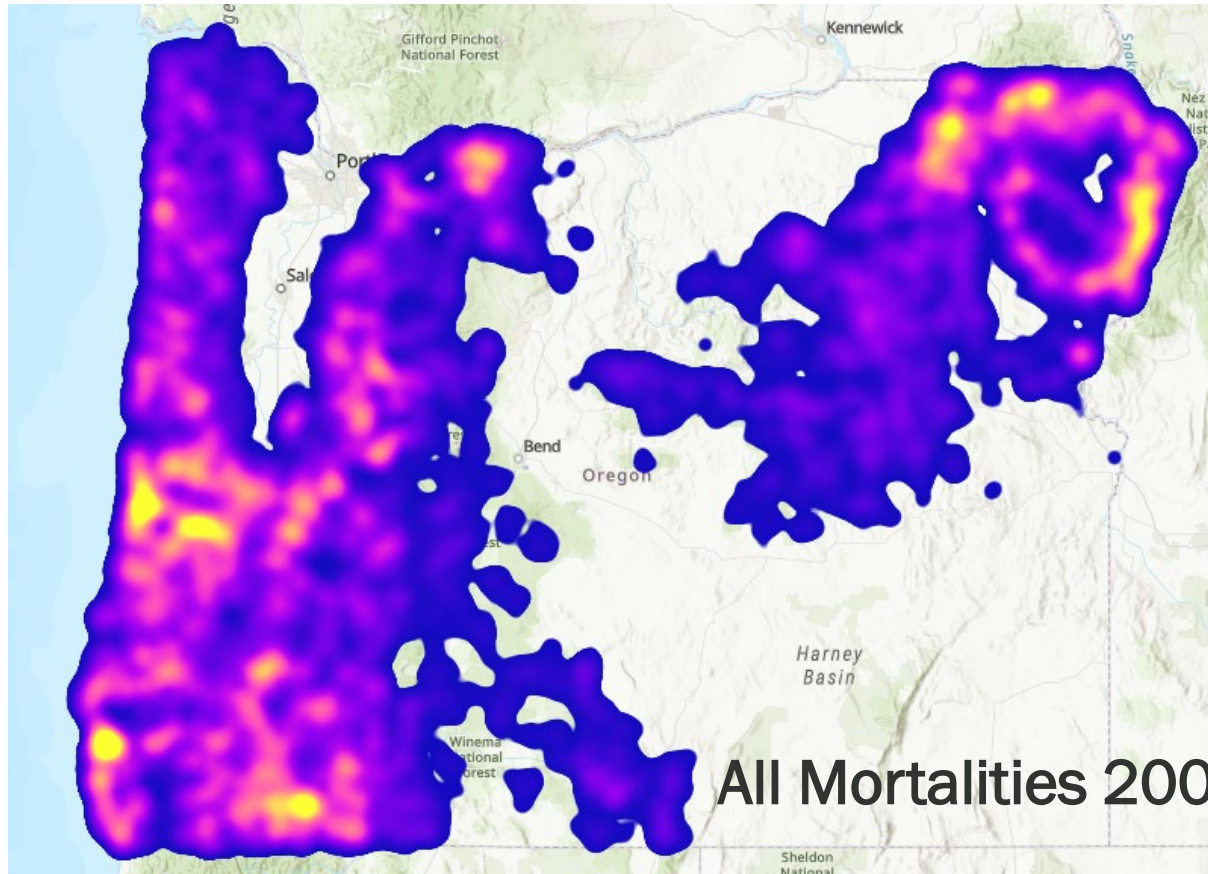

Cougar

Black Bear

- Robust populations
 - Est. 43,000 ($\pm 7,000$) in 2024

All Mortalities 2008-2023

Oregon is
**BLACK BEAR
COUNTRY**

of Fish and Wildlife**

Declining Mule Deer Populations

Many hypotheses for declines

- Habitat loss
- Land management changes
- Climate change
- Declining habitat quality
- Predation
- Vehicle collisions

Research Focus

Habitat and nutrition

- Habitat effects on forage
- Body condition of does
- Demographic effects

Predation

- Cause-specific mortality
- Carnivore abundance
- Compensatory mortality

Study Areas

Aldrich Herd Range

- Started winter of 2022/23
- Conclude summer 2028

Klamath Basin Herd Range

- Started winter of 2023/24
- Conclude summer 2029

Study Areas

Mule Deer Monitoring

Mule deer does

- Capture during winter months
- Equip deer with GPS collar
- Measure body fat levels
- Assess pregnancy and fetal rate
- Equip with VIT to determine birth events the following spring

Mule Deer Monitoring

Mule deer fawns

- Capture during late spring
- Equip deer with GPS collar
- Weigh and determine sex
- Document any siblings

Habitat

Habitat use

- GPS locations
- Use of vegetation types and environmental features

Vegetation sampling

- Forage availability
- Forage quality
- Link back to habitat features

Predation

Document cause-specific mortality

- Accurately assign predator species
- Calculate the percent of mortality caused by each predator

Predation

Estimate carnivore populations

- Collect carnivore scat
- Genetic analysis
- Statistical models
- Annual study area estimate
- Spatial surface of density

Expected Outcomes

Identify factors affecting mule deer

- Habitat
- Predation
- Nutrition

Quantify effects of each factor

- Population models
- Relative effect on population growth rates

Learning Opportunities

Nutrition and habitat

- Wyoming
- Utah
- Colorado

Predation

- Utah
- Colorado
- Washington

Elk Management

**Oregon Department
of Fish and Wildlife**

Elk Management Changes

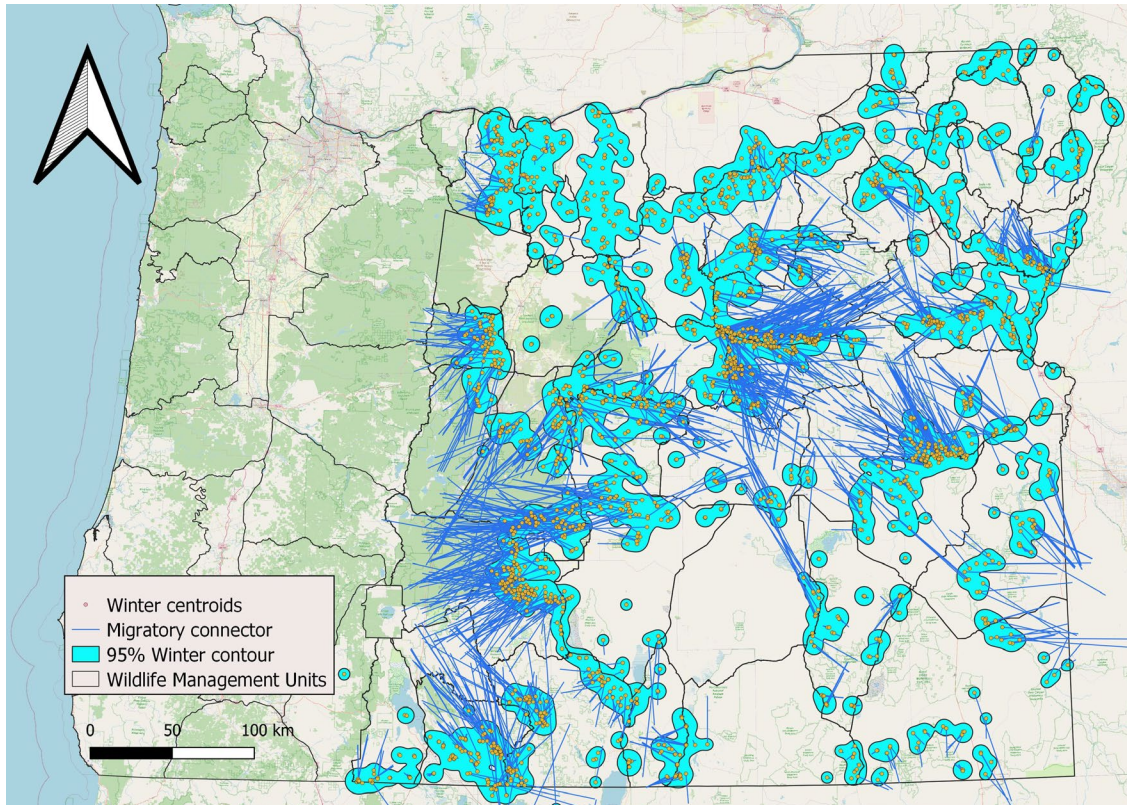

Objectives

Follow the approach for mule deer:

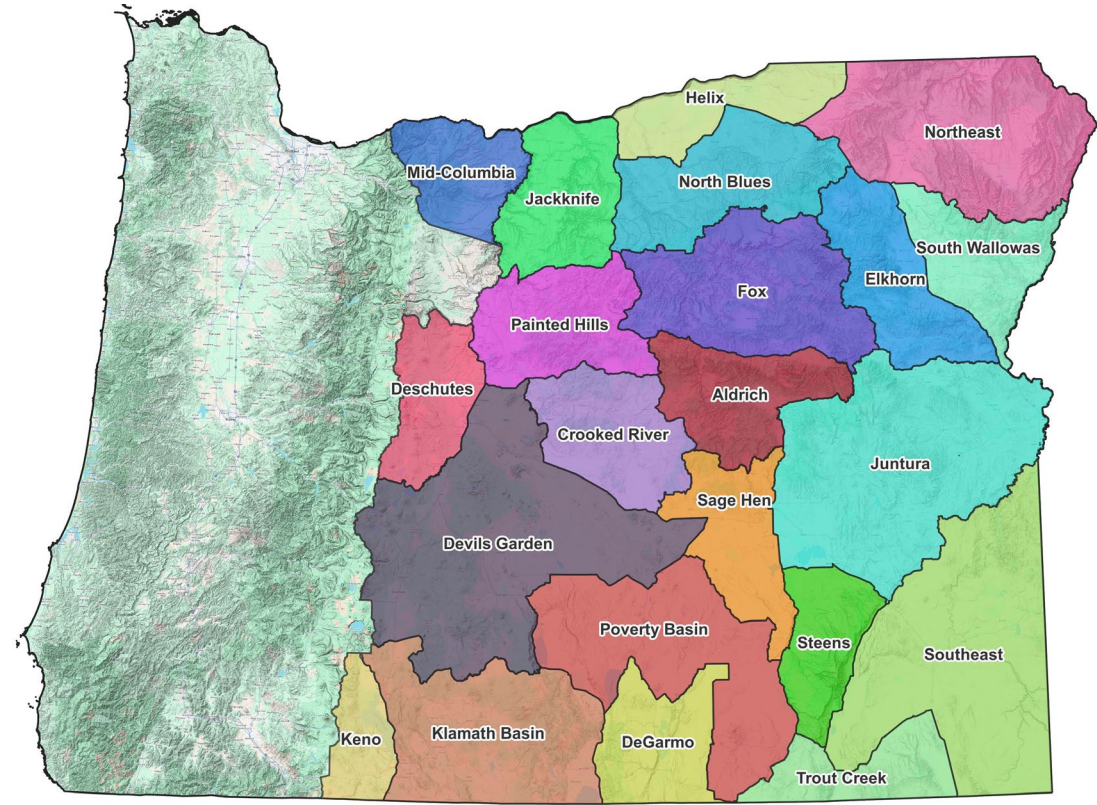

- Identify population boundaries
- Develop survey methods
- Create new population models
- Assess hunt boundaries

Herd ranges: a mule deer example

Use GPS collar data to identify seasonal ranges and movements.

Create population boundaries that encompass winter and summer ranges.

New Survey Methods

Rocky Mountain Elk

- Statistically robust aerial surveys
- Multi-species approach
- Reduce flight time
- Pilot efforts this winter

Roosevelt Elk

- Trail camera-based efforts
- Pilot efforts this winter

Integrated Population Models

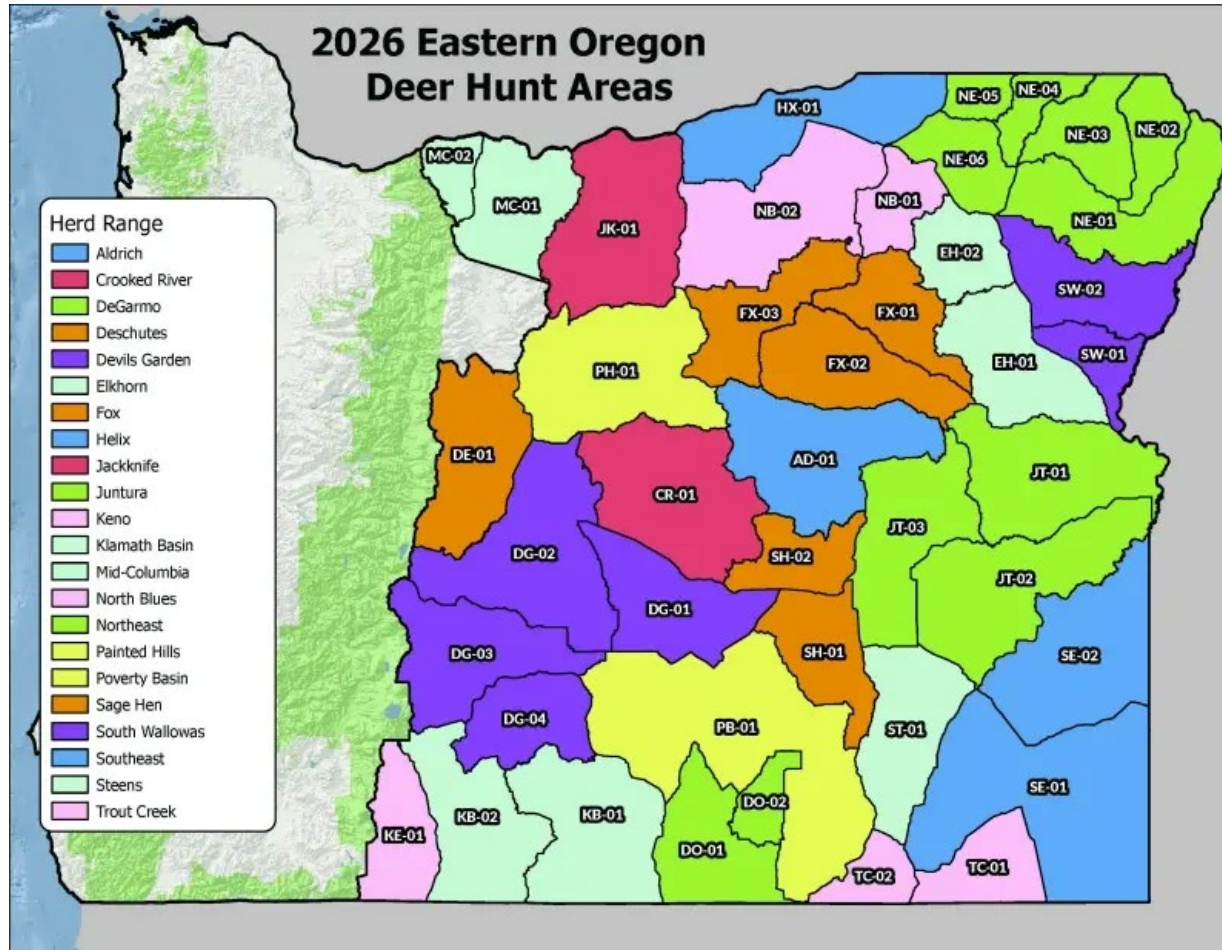

Multiple data sources

- Harvest
- Herd composition
- Abundance
- Survival

Assess Hunt Unit Boundaries

Ensure hunt unit boundaries align with populations.

Thank you!
