Topic: LC 2

I understand that the Republican contingency has a proposal that would not require any new tax increase. Why is this proposal not being considered? Only a person of limited insight would say no to such a proposal. Passage of this huge tax will definitely cause a hardship for the poor and low-income earner and cause them to consider whether to use their limited income for food, for all medical expenses or to preserve their current quality of life for their families. For me it will determine if I will be able to afford the monthly medications I need and if I can continue the medical treatment that if discontinued will have dramatic effect on my quality of life and will be the same for thousands of families like me. The legislature should remember they were elected to provide a good quality of life for the people not for government. So, I say NO TO ANY NEW TAX. The legislators that vote for this tax were voted in by the people and can be voted out by the people.
