Oregon taxpayers should not be burdened with higher taxes and fees just because the government of Oregon and ODOT in particular are poorly managed. Check out any ODOT road crew and it's hard not to notice the gross inefficiency in their work processes. What is needed instead of more money is management that understands how to reduce waste and inefficiency. Clean out the upper levels of ODOT and replace with minimal leadership that understands lean process improvement and waste reduction.

And new ODOT project proposals need to be severely scrutinized for the benefit they are going to provide. It's easy to find very expensive past projects that were nice to do, but didn't really provide any great improvements to Oregon's citizens.

Instead of blindly doing the big government thing and burden the people of Oregon with more fees and taxes, spend some time studying the concepts of 6 sigma, the 7 types of waste, constraint management, lean process improvement strategies, etc. It's easy to find great knowledge of all of these improvement methods and a lot more with a very quick internet search.
