Topic: LC 2

The governor couldn't balance a budget so I say fire the entire engineering department first they are overpaid and never could work in the field to get experience. Example hwy 38 was completely overlayed and then odor hired a contractor to cut and place 40 new culverts now you have a bunch of failed cut.

This is only one example of odot supervision!

Everyone one needs to be cross trained and get their butts out of there chairs
