I oppose this huge unfair new tax.

You are not taxing all vehicles that are using our road system. The entire burden should not ride on those who can not use electric vehicles. I live in a rural area in which I have to drive a lot of miles for services like health care. To visit my doctor I have to drive 240 miles round trip for each visit which happens every other month. We don't have doctors available in our community so I must travel to Eugene.

If you add this tax you need to add it to electric vehicles as well. It should be a very easy calculation. The average vehicle gets 18 miles to the gallon. You know how much the tax is per gallon, so just tax electric vehicles using this rate. Have them submit mileage and payment every three months.

Until you are also taxing electric vehicles I can not support this tax increase.
