

## HB 3788 A STAFF MEASURE SUMMARY

### House Committee On Emergency Management, General Government, and Veterans

---

**Action Date:** 04/03/25

**Action:** Do pass with amendments and be referred to Ways and Means by prior reference.  
(Printed A-Eng.)

**Vote:** 6-0-1-0

**Yeas:** 6 - Boice, Grayber, Lewis, Skarlatos, Tran, Watanabe

**Exc:** 1 - Evans

**Fiscal:** Fiscal impact issued

**Revenue:** No revenue impact

**Prepared By:** Beverly Anderson, LPRO Analyst

**Meeting Dates:** 3/27, 4/3

---

#### WHAT THE MEASURE DOES:

The measure directs the Oregon Business Development Department to develop and administer a grant program to certain hospitals located near tsunami inundation zones for emergency fuel and water storage.

#### Detailed Summary

- Defines an eligible entity as a hospital located within 25 miles of a tsunami inundation zone and lacking storage for a two-week supply of fuel and water.
- Defines “tsunami inundation zone.”
- Requires the department to develop a grant program for capital improvements to enable an entity to store a two-week supply of fuel or water. Allows the department to prescribe an application and review process; prioritizes grants that maximize the emergency preparedness in the state. Allows applicants to reapply within the application period if denied.
- Establishes award, notification, and payment process; requires a process for repayment of grant funds if not used for the proposed purpose.
- Requires the department to include in the grant contract repayment and penalties for false statements, misrepresentation, and willfully failing to report material facts.
- Allows the department to assign repayments and collection to the Department of Revenue; allows repayments to be redeposited to a department fund.
- Sunsets on January 2, 2028.
- Appropriates \$10 million to the department for the grant program.
- Declares emergency, takes effect on July 1, 2025.

#### ISSUES DISCUSSED:

- Concern about the Cascadia Subduction Zone and the potential for a large earthquake off the Oregon Coast
- Fuel and water are needed to maintain daily operations at hospitals and a four-week supply of both is ideal
- Examples of the impact on hospitals after a tsunami, winter storm, and hurricane

#### EFFECT OF AMENDMENT:

Replaces the words 'medical facility' with hospital.

#### BACKGROUND:

According to the Oregon Coastal Hospital Resilience Project (2020), Oregon’s coastal hospitals are especially vulnerable to an earthquake due to their proximity to the Cascadia fault and the expected long-term disruptions in emergency fuel and water supplies. In addition, many hospitals were built to older seismic building codes that have since been determined to be inadequate to withstand a Cascadia earthquake. The report also recommended

**HB 3788 A STAFF MEASURE SUMMARY**

that coastal hospitals prepare to be locally self-sufficient for three weeks, as it might take that long for state and federal agencies to be able to provide emergency assistance.
