

Requiring medical professionals to electronically sign death certificates streamlines the process, reducing time delays associated with paper submissions. Electronic systems minimize errors, such as incomplete or illegible entries, which are common in paper records. Additionally, it lowers administrative costs by eliminating the need for physical handling, mailing, and corrections. This House Bill ensures greater accuracy, efficiency, and cost-effectiveness in vital record management. Families will be able to access benefits due to them quicker & medical professionals will spend less time correcting and resigning certificates; allowing them to focus on patients.
