

Submitter: Austin Sayer

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3119

The advanced clean trucks initiative is something we need to strive towards being able to implement. However, we need alternatives to these diesel vehicles that currently do not exist or are not manufactured in large enough quantities to meet the needs of our state. By waiting a couple years, the rapidly evolving ev industry might have a chance to catch up to this initiative turning it into a successful implementation of regulation rather than another failed policy pushed through by bureaucrats who have never depended upon a diesel truck to make their livelihoods.
