Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3119

The Advanced Clean Trucks regulations are extremely far fetched and impractical. We do not have the technology nor infrastructure to support this. I live and work on a family owned farm. It will prevent us from purchasing new more efficient diesel engines and will force us to run our older equipment. At this time and for the foreseeable future our farm cannot transition to electric vehicles. These rules would eventually put my family farm out of business.
