

To whom it may concern:

I am in opposition of HB 3419. I believe that putting water meters on domestic and exempt use wells will create an undue financial burden on rural Oregonians. It would potentially cost the end user an additional \$1200-\$5500 to have a meter installed, In addition to the annual costs of maintenance and upkeep of the meter. This in my mind is unacceptable. I feel that metering the water from a private well is overreach at best.

Thank you for your time.
