On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3546

Oregon residents and small businesses have seen electricity bills skyrocket over the last couple years, while greedy corporations have worked out sweetheart deals for their rates while they gobble up massive amounts of energy and strain the grid. It really seems as though family and small business ratepayers are subsidizing these data centers and the infrastructure that supports them. These corporations must pay their fair share for electrical rates and for the infrastructure that is needed to support these mega data centers.
