Measure, Appointment or Topic: HB3546

I support this bill. I was wondering why I kept getting notices from the electric company how I can cut back on saving electricity and it just so happens it's the only time I'm actually home. These companies have more than enough money to pay their electric without getting a deal. These data centers aren't benefiting the majority of people who live here. They should pay more than their fair share because they barely supply long term employment for anyone living here. Their parasitic to small communities like ours and just want take all of the resources without helping the community.
