

Submitter: Shannon Diez

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3546

HB 3546, the "Power Act," is completely logical: new big energy users like data centers pay their share of the needed expansion costs of the grid that are required to meet their needs. Households and small businesses do not help to subsidize that expansion, as they were fine without it. The data centers will commit to paying for minimum energy use and pay more for excess energy use. HB 3546 sets up a structure for that to happen, and for power producers to plan for the future without increasing costs for the vast majority of energy customers."
