On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

Beavers as a keystone species offer the opportunity to provide ecosystem management and improve water quality at low cost to the state and tax payers. Yes some thoughtful management needs to take place for beavers and humans to live in harmony but implementation of beaver deterrence is far lower than the cost of not having them around. Give beavers a chance and they will improve our state's waterways!
