Measure, Appointment or Topic: HB3932

I strongly support this bill !! Our state waterways are in dire need of help and this bill would be a great step forward. The historical importance of the beaver (in the Beaver State) can't be overstated and their absence from our watersheds has been one of the factors in the rise of water temperatures and the development of poor quality water. The work of beavers along waterways increases water quality, increases habitat for other wildlife and reduces fires (another pressing issue). Please support this critical bill.
