Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

I support HB 3932. Throughout the West beavers have been hunted and trapped mercilessly over the decades. Through my volunteer work with the Oregon Natural Desert Association and other conservation organizations I have assisted on many stream and waterway restoration projects that not only improve the health of the waterways themselves, but have provided numerous ecological benefits to these water corridors. We need a strong, thriving population of beaver in their natural environment to continue allowing our waterways to function as they are intended. I urge you to vote in support of this legislation for the positive outcomes that will result from its passage.
