

Submitter: Jason Wells

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

I am writing to urge you to support HB 3932. Water quality is an issue important to Oregonians, which we routinely spend considerable resources to improve. Beavers act as a force multiplier, helping our efforts by slowing streamflow, reconnecting the floodplain, and naturally filtering sediment. This bill would have a minimal impact on fur trade, but would ensure every resource for improving water quality is available. Please support this bill by passing it out of committee, and on the house floor.
