

Submitter: Anna Chapman

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

HB 3932 is providing a low cost solution for Oregon's impacted waterways simply by allowing beavers to do what they do on our public lands. Beaver dams help to regulate and correct damaged stream beds, eventually providing renewed riparian growth and a thriving ecosystem along that waterway, a benefit for many other native animals. The bill is not impacting beaver trapping on private lands and allows for trapping as needed for beaver populations that impact or damage private land from public land waterways. I ask for your support to pass this bill and to allow our beaver population to help rebuild Oregon's high desert waterways.
