

Submitter: Carolyn Riddle

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

HB 3932 offers important protections for beavers. There is abundant evidence that where beaver dams are located and the beavers themselves are flourishing, the entire ecosystem benefits not only wildlife, but human neighbors as well. The ponds created by these dams help regulate water temperature, increase the numbers of fish, birds, and other wildlife in the area, and generally improve water quality. This is advantageous for local water systems that people depend on too, not only for home and business use, but for tourism and outdoor sports as well. Please support HB 3932. Thank you.
