Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3932

I'm writing in support of HB 3932. Beaver are vital to improving stream health. Removing harvest pressures on beaver in "impaired" stream systems has monumental potential at no cost. Allowing beaver to do the heavy lifting without red tape and funding by building AND maintaining dams has many benefits such as filtering toxins, cooling water temperature, and controlling excessive sedimentation. This, too, will benefit salmon and other animals. For these reasons I very much support HB 3932 and I hope you do as well.
