

Submitter: David Wall
On Behalf Of: Mr Oregon OPPOSES SB 1189
Committee: House Committee On Agriculture, Land Use, Natural Resources, and Water
Measure, Appointment or Topic: SB1189

I OPPOSE [SB 1189]. [\$50,000,000] does not go very far in a modern POTW construction.

Before I am pilloried into the next world, here are my questions to a much-needed Publically Owned Treatment Works (POTW).

There is 'No' description as to the Treatment Level.
Is the POTW a Primary, Secondary or Tertiary treatment facility?
Will there be an onsite sophisticated Laboratory?

What type of influent will the POTW expect?
Obviously residential, but will there be Industrial Wastes?
How will Ammonia levels be treated?
Will there be a 'Fats, Oils and Grease' program?
Will there be a 'Source Control' program?
Will Septic Haulers loads to the POTW analyzed prior to discharge into the POTW (they had better be)?

What will happen to the sludge?
Will sludge lagoons be created and utilized?

What is the treated water effluent in million gallons per day (MGD)?
What disinfection method will be used?
Will percolation ponds be created and utilized?
How will the effluent temperature be lowered prior to discharge?

David S. Wall

Mr. Oregon Concurr and says, "Leaking septic tanks are the responsibility of the property owner. There should be a 'monitoring program' to detect faulty septic tanks and corrective remedies."
