Measure, Appointment or Topic: HB4028

Insurance companies should have tighter regulations in many areas but especially in clawback abilities. If clawbacks were limited to 12 months this would give providers an understanding of any failures on their end and the ability to amend their practices going forward. Many individual and small practice providers are financially devastated by extensive clawbacks.

Also, 60 min therapy sessions 90837 should not be suppressed. This has been and continues to be the standard length of time. Many clients would not be receiving proper care if their care was limited to 45 min or less.
