House Committee On Climate, Energy, and Environment

Measure, Appointment or  
Topic:

HB4080

Our family strongly supports this bill which will open up savings and carbon free electricity to renters and to homeowners who cannot afford installing rooftop arrays, or who have roofs unsuitable for solar installation. "Balcony solar" has the advantage of being portable and being easily transferred when renters or homeowners move. Balcony solar has been proven in Europe and is now spreading quickly in the U.S. with more than 20 states working on passing bills, or, as in the case of Utah, having already made this cost-saving advantage available to their residents.
