Topic:

HB4080

I'm writing in support of HB4080 for balcony solar power systems. I believe energy sovereignty applies to everyone, even those who rent and cannot install roof solar power. This bill allows renters the ability to create their own energy and therefore autonomy. The bill allows for safe UL listed devices to add 1.2 kw to home electric power. It also helps Oregon reach energy sovereignty which is crucial if we are going to transform our energy system to renewable energy before we cook ourselves on this planet. These reasons are more important than energy utilities that want to keep control over the power every one needs to survive. Thank you.
