HB4007

The need to classify the variety of electric motorized mobility devices and clarify users and responsibilities time has come. With the ever changing electric powered mobility devices such as wheelchairs, e-bikes, scooters, one wheel and an electric powered mobility mini-bike that can exceed 25 miles an hour. We transitioned from a combustion engine to electric power mobility device which are easily available in line and delivered to your home with no guidelines or restrictions. Do you remember mini bikes with lawn mower engines or mopeds all capable of 30 mpg or more. At that speed a collision with pedestrian, cyclists would likely cause serious injury or death.
