Measure, Appointment or Topic: HB4007

This is a much-needed step toward getting the law in line with reasonable expectations of human behavior on small e-mobility devices.

These devices continue to proliferate in society and currently the rules are so unhelpful that people trying to educate students can't use e-bikes but more reckless people completely ignore the rules.

I am hopeful that having reasonable rules like the ones proposed in this bill will help people think about following the new rules instead of completely ignoring the rules which is currently happening.
