Committee:

House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic:

HB4080

Oregonians deserve access to clean energy, and more ways to cut electricity bills, as energy costs continue to increase. That's why I support plug-in solar, to allow roughly 70% of households to be able to generate their own solar energy without complex utility agreements designed for much larger rooftop systems.

This bill is important to me because I am considering getting solar myself. This will open the option up even to people who can't afford elaborate systems. In power outages, those who choose the battery option will have some stored power to use in case of an outage.

As legislators, you have the power to allow many more of us to participate in the transition to clean energy. I urge you to pass HB 4080.
