Senate Committee On Education

Measure, Appointment or Topic:

SB1581

Every human needs food. Not a surprise. I worked in schools directly with children from 10-18 for 34 years. Having food is critical to the body and the brain. We need to support our children by providing for those who cannot afford good food , because they are our future !!! We always made certain fruit and protein meals were available to kids to support them to be successful.

There are also many seniors and disabled adults who need food as well. They are part of our community and have contributed to build our communities and now they need extra help. It is inhumane and just wrong not to help other human beings with something as basic as food. My own sister, born with cerebral palsy, has always needed extra help, but she did work for 24 years and provided love and care to toddlers . We need to support her and the thousands like her.

Please think of our fellow humans and realize they are part of all of us and vote for food in schools and for all.

Thank you.
