

Submitter:

Robert Marquis

On Behalf Of:

Committee:

House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic:

HB4080

Dear committee members considering HB4080,

Thank you for giving me a chance to make a testimony. With rising electricity costs, and a power grid that is becoming more and more stressed with such demands as EV chargers in individual residences,

it makes sense to encourage the use of alternative sources of energy. Balcony solar panels will benefit a wide range of consumers, reduce the overall demand on our powered grid, and provide a less expensive alternative to rooftop solar panels. This bill would also protect consumers from fees and rules imposed by HOAs and landlords regarding the use of alternative sources of energy. In short, there is nothing lost and much to be gained by approving this bill and forwarding it to the floor for passage. Thank you.

Sincerely,

Bob Marquis
