

Submitter:

Debra McGee

On Behalf Of:

Committee:

House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic:

HB4080

Plug- in or Balcony Solar will open up new opportunities for people to reduce their energy bills while reaping clear energy from the sun. In our community, about 50% of families live in rental homes or apartments, if Balcony solar is made available, folks can take their solar energy unit with them if they move to a different dwelling.

If people can reduce their monthly bills by 10-20%, it will relieve some of the increasing demands on local utilities.

While these units are small - they are a single step in reducing fossil fuel energy use - and in the collective could reduce carbon in our atmosphere.

I strongly support this measure!
