

Submitter: Rick Hamell
On Behalf Of:
Committee: House Committee On Transportation
Measure, Appointment or Topic: HB4085

Life long resident, and someone who works in IT, implementing AI.

This measure is bad for Oregonians on so many levels.

- despite laws, residents still have a reasonable expectation of privacy even in Public. This is a step away from China levels of 24/7 surveillance. We have hundreds if not thousands of books and movies about why this is a bad idea.
- AI is still not ready for real time usage. It still disproportionately mis-identifies POC as suspects, costing lost time and money on prosecutions, legal bills for people whose only crime is being Black, and doesn't actually make the public safer.
- AI is demonstrably getting worse. Not only are people purposely poisoning it with false data, it is being manipulated by rogue nations and special interests to provide false information.

I urge you to vote no on this. There are literally zero benefits of this product to Oregon residents, and only benefits to large out of state corporations.
