Submitter: Ryan Kolodziejczak

On Behalf Of:

Committee: House Committee On Transportation

Measure, Appointment or Topic: HB4085

No robot cars, no video data harvesting.
We have enough bad drivers today. We don't need crappy robots and their ai that still needs training on our road ways. Especially if someone gets into an accident, we have to deal with some random company instead of holding an individual accountable. The self driving cars are annoying enough already. Especially those EVs when their brake lights don't come on until the last second before a complete stop.
