

Submitter:

Francis Kovac

On Behalf Of:

Committee:

Senate Committee On Early Childhood and
Behavioral Health

Measure, Appointment or

SB1573

Topic:

I oppose this restriction because syringe service programs are proven, evidence-based public health interventions that reduce overdose deaths and the spread of infectious disease. Restricting mobile access creates avoidable barriers to life-saving care and undermines community health, without any evidence that these limits meaningfully improve safety for children or child care settings.
