Paul Thomas

On Behalf Of:

Committee:

Senate Committee On Health Care

Measure, Appointment or Topic:

SB1598

As one of the only pediatricians in the country who has published data on the differences in the health of vaccinated children, compared to the health of unvaccinated children, and a pediatrician who practiced in Oregon for the past 35 years I am uniquely able to see the effects of vaccines on health that most pediatricians have no knowledge of. The sad truth is that the vaccinated children suffer from neurodevelopmental issues, allergies and asthma and infectious diseases of all kinds at much higher rates than the unvaccinated. Given that vaccines have dangers and risks - they should never be mandated. PERIOD.

Oregon has had a system for vaccine exemptions that has worked well. The change giving the public health apparatus even more power to mandate treatments for healthy children that may harm them is a massive mistake.

You need look no further than the COVID mess, where there was massive harm inflicted on the public by the COVID shots that were never properly tested for safety and side effects.

Please vote no to this dangerous bill.
