

Submitter: Leah Reznick

On Behalf Of:

Committee: Joint Committee On Information Management and
Technology

Measure, Appointment or Topic: HB4054

Co-Chairs Pham, Nathanson and Members of the Joint Information Management and Technology Committee, my name is Dr. Leah Reznick, a pediatric ophthalmologist, and I am writing to urge your support of HB 4054. This bill adds much needed transparency to the emerging issue of downcoding. Downcoding happens when a provider treats a patient and submits a claim for reimbursement, and the health insurer reimburses them at a lower-level code. Recently, some insurers have started to downcode large batches of claims using artificial intelligence technology. The lack of transparency around this process and technology makes it difficult for clinics to track when claims have been downcoded. This means that clinics have to spend significant staff time to track downcoded claims and appeal them rather than focused on patient care. I respectfully urge your support of HB 4054. This bill does not ban the use of AI, it simply adds much needed transparency to this emerging technology.
