

Submitter:

Janet Rueger

On Behalf Of:

Committee:

Senate Committee On Health Care

Measure, Appointment or Topic:

SB1598

Unelected officials must NOT be able to make decisions / create rules concerning medical procedures, including vaccines. We must be able to choose which vaccines and medical procedures we will have and which not. Those decisions must be made by the individual person and if needed, with their doctor's guidance.

Medical doctors must be able to advise people to either have or NOT have any procedure. Medical doctors must be REQUIRED to give all patients information, both pro and con, on each and every procedure, including vaccines. That includes providing the package insert with vaccine information.

Many people are allergic / adversely react to the ingredients in some vaccines. People must have the freedom to say no to a vaccine. It is now known that many vaccines do NOT confer the immunity it was thought they gave, thus many vaccines are NOT protecting others as it was thought they did.

Personally I know 2 severely autistic individuals, now both over age 24, who became autistic following vaccine administration. These individuals are unable to work and their mothers are their full time caregivers. The cost of this to society is tremendous.

Unelected officials are usually appointed by the governor. The governor receives financial donations from pharmaceutical companies and from groups that funnel money from pharmaceutical companies to her and to other politicians. When money is making the decisions, it's clear that the health of citizens is no longer a priority over the politicians financial situation.

NO on 1598!
