Senate Committee On Health Care

Measure, Appointment or Topic:

SB1598

As a practicing physician in pediatrics specific to hospitals (pediatric hospitalist), vaccine access and affordability is the single most preventive measure that will help our pediatric population and general population. When our children are healthy; families remain healthy and focused on remaining productive members of society. Just in recent innovation, the advent of RSV vaccination has seen major impacts already with admissions and morbidity. Vaccines work. But only if the knowledge, access (both financially and physically), and cessation of fearmongering are improved upon.
