

Submitter: Deidre Burton
On Behalf Of:
Committee: Senate Committee On Health Care
Measure, Appointment or Topic: SB1598

Dear committee Members,

I have had the honor of practicing pediatrics for nearly 32 years. In my training I studied in Los Angeles during the measles outbreak and saw dozens of children hospitalized and die from complications. As a volunteer I have worked in underserved countries with limited access to vaccines and seen the impact of diseases that should be preventable. In my early career I took care of more children with pertussis, tetanus, bacterial meningitis, tracheitis and epiglottitis than I care to think about. I had hoped that these were diseases I would never see again. If access to vaccines is restricted the consequences on our community will be deadly and swift. The communities that will be hit the hardest will be those already marginalized and experiencing poverty, homelessness, food scarcity. etc.

We the pediatricians and pediatric care providers of Metropolitan Pediatrics are worried about vaccine affordability and access in Oregon. I support SB1598 to ensure that Oregon families do not have additional cost or logistical barriers to obtaining preventative vaccines. This bill champions patient choice, by ensuring those who want immunizations are able to do so without having to worry about payment or making a hard to come by appointment with their primary care physician or pediatrician to undergo mandatory shared decision making.

SB1598:
Protects access to preventive care. SB 1598 helps ensure Oregonians can continue to access evidence-based preventive services without new barriers or delays.
Responds to recent federal changes. Shifting federal guidance in 2025 limited access to certain immunizations, creating confusion for patients and providers without being based on new safety or efficacy data.

Ensures continuity of coverage. Updating Oregon's insurance code to June 30, 2025 preserves coverage for widely supported, evidence-based preventive services.
Supports patient choice. SB 1598 does not mandate immunizations or require anyone to receive care.

Allows Oregon to act nimbly. Standing order authority gives the state tools to respond quickly when federal guidance changes and access is at risk.
Respects medical judgment. Providers may continue to practice according to evidence-based recommendations and their clinical expertise.
Keeps decisions between patients and providers. SB 1598 reinforces science-based care while maintaining flexibility and trust in the clinician-patient relationship.
