446 Constituents Say No on HB 4046

Chair Lively, Vice Chair Gamba, Vice Chair Levy, and members of the Oregon House climate, energy and environment Committee:

I am urging you to vote no on HB 4046, the nuclear “study” bill.

This “study” bill is not about an honest look at the pros and cons of nuclear power. It’s a vehicle for the nuclear industry and their Big Tech backers to get a foothold in Oregon and lay the groundwork to come back in future sessions with more proposals like those in 2025 to exempt Umatilla County from our statewide moratorium on new nuclear reactors, or to dismantle the moratorium itself.

Concerns about the bill include:

- **Private and federal funding would pay for the study.** This opens the door for private funders with a financial interest in nuclear projects — like big tech, nuclear corporations, and the nuclear safety-slashing Trump administration — to pay for the study they want, not a study we can trust.
- **Affected communities are left out.** Shutting meaningful community input out of the process will not create a robust and trustworthy study.
- **Federal nuclear safeguards are being thrown out the window.** In recent weeks, the federal government has accelerated its efforts at destroying national safety standards for nuclear development in the U.S. This includes secretly [rewriting nuclear safety rules](#) with industry involvement, exempting new nuclear projects from National Environmental Policy Act rules, and more. The federal government’s recent actions prompted Washington legislators to stop a nuclear “study” bill, and Oregon should follow their lead. We must protect ourselves.

Please vote no on HB 4046 and Keep Oregon Nuclear-Free.

446 petition signers as of February 11, 2026

249	Culwell, Debra	2/9/26		Gresham	OR
250	Stone, Andrew	2/9/26	We know everything about nuclear power. The waist is forever. It's never clean. As yet, there is no such thing as small or modular reactors. They would create the same waste. Nuclear is always expensive when you include all the costs. Oregon has been very successful at flattening the growth curve for electric demand three efficiency and other demand reduction. The Pacific Northwest is building a lot of wind and solar. Various types of storage are better and cheaper every year. We wouldn't build new coal plants. We shouldn't build new nuclear plants. Don't waste our time and money studying a dead technology.	Fairview	OR

421	Medeiros, Linda	2/10/26	There are already sealed salt caves bordering the Columbia River on the Washington side that contain nuclear waste in metal barrels that were improperly sealed and and which have been leaking for years. This is waste from the 1950's. It is expected that this nuclear waste will at some undefined point in time leak into the Columbia. Groundwater has been contaminated and radioactive fish have been found. Not much has been able to be done about this leaking waste. All this has been documented but is largely secret and not talked about by government officials. This is the most nuclear polluted site in the US. Do we really need more contamination?	Medford	OR

249	Culwell, Debra	2/9/26		Gresham	OR
250	Stone, Andrew	2/9/26	We know everything about nuclear power. The waist is forever. It's never clean. As yet, there is no such thing as small or modular reactors. They would create the same waste. Nuclear is always expensive when you include all the costs. Oregon has been very successful at flattening the growth curve for electric demand three efficiency and other demand reduction. The Pacific Northwest is building a lot of wind and solar. Various types of storage are better and cheaper every year. We wouldn't build new coal plants. We shouldn't build new nuclear plants. Don't waste our time and money studying a dead technology.	Fairview	OR

421	Medeiros, Linda	2/10/26	There are already sealed salt caves bordering the Columbia River on the Washington side that contain nuclear waste in metal barrels that were improperly sealed and and which have been leaking for years. This is waste from the 1950's. It is expected that this nuclear waste will at some undefined point in time leak into the Columbia. Groundwater has been contaminated and radioactive fish have been found. Not much has been able to be done about this leaking waste. All this has been documented but is largely secret and not talked about by government officials. This is the most nuclear polluted site in the US. Do we really need more contamination?	Medford	OR
