Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB4046

Why mess around with nuclear energy when renewables are the way of the future? There are several excellent bills in this session supporting the renewables revolution, and I proudly support them. I do not support paralysis by analysis, and I do not support bad faith tinkering. I suspect the aforementioned legislators have made some deal with big tech actors thirsty for every electron they can throw at their destructive data centers. No data centers, no dirty and dangerous nuclear plants. Power to the people!
