

Submitter: Philip Hartog

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB4046

I oppose HB 4046 (the bill to study nuclear energy).

Vote no.

We have no way of safely storing nuclear waste. Nuclear power is still not a viable option. To use it to supply power to AI is ludicrous at a time when our resources are dwindling. Such a frivolous use of resources is mind-boggling and fits in with the insanity of this moment.

I respectfully request you do not move forward with this bill or any nuclear power bill.

Sincerely,
Philip Hartog
