

Submitter: Darla Sult

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: HB4031

The amount of damage the land will sustain is not worth it!

The wildlife and water sources will be greatly affected and there is no reversing that damage!

Why isn't our power cost going down as that was the promise when this crap was presented to the public and in fact the cost has risen dramatically!

The only people benefiting from the green scam are those involved with promoting it and those supplying the materials.

The days of people blatantly following what the state government tells them is over and we are demanding the bureaucrats listen to we the people. The lobbyists are not looking out for the best interest of our state they are only concerned with lining their pockets with our tax dollars.
